

Official-War-Thunder-Calculator

This calculator can calculate multiple functions that are built into program. This program is subject to change as more functions get added and edited.

In order to use the calculator correctly please use the file "start.cmd" to operate the calculator. One in the calculator

You can use some of the functions that are included. Some are going to be replaced but as of now this is the working version.

Instructions on how to operate:

1. Make sure a version of Java is installed on your computer. If not use this link (<https://java.com/en/download/manual.jsp>)
2. Download these files and make sure there in the same place (like in the same file so they work normally)
3. Use the "start.cmd" file to run the calculator in a viewable interface
4. Use it to the extent of what you need it for
5. Leave suggestions on what functions you want to see next

Known bugs:

Function 1

- Fixing the max aircraft you can put into the function as we speak and will be re-uploaded once it has been fixed

Function 4

- Haven't made it print the options so don't uses as were working on finishing the last function that is more simplified and is better for the users

Function 8

- The following has been having issues with large amounts of golden eagle pricing. I and my friend are still trying to sort out why this issue is occurring. May be a simple fix but will post an update ASAP when we fix it. Regardless it works with numbers lower than 10,000
